President

Haven Technology Solutions, LLC

Phone: (281) 305-9009

Email: [Haventtechnologysolutions@gmail.com](mailto:Haventtechnologysolutions@gmail.com)

David Elms of Magnolia Texas is co-owner/founder and president of Haven Technology Solutions, LLC. David currently manages and leads a team in all aspects of R&D and manufacturing.

David spent years performing independent R&D testing for companies such as BASF and Ford Motor Company. Shortly after April 22nd, 2010, the date remembered as the Macondo incident; David proposed an idea to his future business partner, Greg Hudspeth of Amarillo Texas. The Conception was to detect and then extract a slug or "kick" from a drilling annulus under a full flow condition, which yielded developing an innovative gas-liquid full flow technology that is now being applied across multiple industries. Haven Technology Solutions' GVF Eliminator has become an innovative solution to detection and extraction of fluctuating gas void fractions of 0-100%; while maintaining and stabilizing flow rates without traditional separation methods based on residence time.

David has seven years of research and prototype testing of Haven Technology Solutions intellectual properties that have evolved into multiple national and international patents. David continues to identify R&D process challenges that need new innovative development to provide solutions for today and tomorrow's growing technology demands.
