**PRACTICES** AI and Deep Learning, Intellectual Property

---

Haynes Boone (“Hb”) is pleased to introduce our firm’s new podcast series: **AI Chats<sup>Hb</sup>**. Our bi-weekly podcasts will cover a broad range of technology and legal topics in artificial intelligence (“AI”) and deep learning. Renowned AI theorists and developers will join Hb attorneys to discuss the current and prospective uses of AI in a broad range of technology areas, including machine learning, health care, autonomous driving, cloud computing, natural language processing, and medical devices. Our presenters will also cover novel legal issues presented by using AI in business operations, intellectual property portfolio development, privacy and data protection, and employment law, among other topics.

We invite you to join us to learn about AI, how it can help your business, and what you can do now to best position your business in the future.

Hb’s multidisciplinary AI and Deep Learning group brings together technical knowledge and industry experience to effectively advise clients operating in this rapidly evolving space. The AI and Deep Learning group helps companies and individuals safeguard their core products and methodologies. Our experience covers all aspects of AI, machine learning, and deep learning technologies.

Please visit our group’s [webpage](#) to listen to completed podcasts and for additional information and resources.
